ABOUT US

Infiniti Global and The Gen AI, a pioneer in healthcare technology, will operate as one unified team to deliver a transformative solution: a next-generation Organ Transplant Intelligence Platform-**Flambou**. Unlike the legacy system, our platform is built for the modern world: predictive, transparent, fully auditable, and capable of saving thousands more lives every year.

PROBLEM STATEMENT

More than 100,00 people wait for organs in the U.S. every year. Delays and friction translate to preventable deaths and waste. Legacy allocation logic and disconnected total create offer fatigue and slow acceptance. Patients and families lack visibility, which erodes trust.

SOLUTION

Our solution aims to modernize organ transplant coordination, starting with kidneys, by creating a secure, interoperable platform that enhances donor-recipient matching. Even a 10% efficiency gain represents a meaningful revenue opportunity at the center level and a many times larger opportunity on a national scale. Beyond revenue, the social impact is immediate and visible.

MARKET OPPORTUNITY

The market opportunity for this industry exceeds \$45 million annually. Recent government guidelines introduced in 2023 have opened the door for companies like Infiniti Global, an SBA 8(a)-certified organization, to enter the market. By taking a 360-degree approach that addresses prevention, organ donation, medical risks, and related needs, Infiniti Global aims to drive innovation and develop additional products.
